

Control of Noise. The level of sound at which we must supply you with hearing protection and hearing protection zones is 85 decibels. We have tested our equipment and spaces for sound exposure, and this has shown that although you may be exposed to high levels of sound you are very unlikely to be exposed to anything above 85 decibels. However, as a control measure we provide hearing protection to be used within the workshops in the Design Centre and whilst operating in an area where the following equipment is being used:

- Bandsaws;
- Sanding machines;
- Spray room extraction;
- CNC router;
- Portable and table router;
- Laser cutter extraction.
